An architectural highlight is located in the Japanese city of Wakayama, not far from Osaka. The construction of the new headquarters of the textile company A-GIRL'S CO. LTD. started in 2022 and the building was completed in the same year. In addition to the exceptional architecture, the material mix of [prePATINA ECO ZINC](#), wood and concrete make the building particularly impressive. The building, constructed using RHEINZINK material, houses offices, an exhibition area and a shop.
